Final Assignment Overview

Project Submission Requirements

Now it's your turn to demonstrate your understanding of data science methodology.

During this final project you'll complete **3** tasks for a total of **10** points to demonstrate your knowledge of CRISP-DM data methodology.

First, you'll take on *both* the role of the client *and* the data scientist to develop a business problem related to one of the following topics:

- Emails
- Hospitals
- Credit Cards

You'll use the business problem you defined to demonstrate your knowledge of the Business Understanding stage.

Then, taking on the role of a data scientist, you'll describe how you would apply data science methodology practices at each of the the listed stages to address the business problem you identified.

You'll enter your answers in the text fields provided online. After you submit your assignment, one of your peers who are is completing this assignment within the same session will grade your final project. You will also grade a peer's assignment.

Please note that this assignment is worth 10% of your final grade.

Note: You can take as many breaks as needed between the exercises.
